

Project: Digital Signage

Description:

The project's goals are to replace the static displays currently in use with networked monitors that can display dynamic content streamed from a central location. This technology is commonly referred to as "Digital Signage." The monitors will have embedded computers that store content to be played locally and will pull networked content as it is changed. The monitors will be capable of transmitting a variety of information such as PowerPoint, Flyers, Video, Really Simple Syndication (RSS) feeds, and more.

Project Advisor: Ms. Carolyn Dull
